AI Engineer specializing in **LLMs** and **ML systems**. I build fine-tuning and evaluation pipelines and the surrounding **LLMOps** to make models production-ready. I care about clear metrics and optimizing AI systems for real-world impact, with interests spanning robotics and on-device ML.

Personal: I like building end-to-end systems and writing concise technical notes. Outside work I train regularly and spend weekends skiing when possible.

EXPERIENCE

ML Engineer → ML Engineer Lead (promoted)

May 2024 – Oct 2025

Simplex Rapid

Milan, Italy

- Integrated LLM and AI systems into precision mechanics workflows covering model selection, domain adaptation, deployment, observability, and cost/latency optimization.
- Built a multilingual translation pipeline with fine-tuned models across **20 languages**; achieved **~53% touchless rate** and reduced human effort from **~8,000h** to **~2,350h** (**~71% reduction**). Estimated **~76% cost reduction** based on QA sampling and project logs.
- Migrated an agentic business assistant to the Responses API with tool calling, monitoring, and tracing for reliability and auditability.
- Combined LLM and vision to extract technical parameters from spring drawings/PDFs with per-field validation and human-in-the-loop review, enabling automatic population of manufacturing data.

PROJECTS

SSL for RCC Classification. *Self-supervised learning on histopathology WSIs for subtype discovery; preliminary phase completed with **30/30 with honors**; paper in progress; pending publication.* **2026**

Affordance 3D Highlighting. *Zero-shot localization of functional 3D regions from language prompts, inspired by CLIP and 3D Highlighter (CVPR 2023).* **2025**

Embedded Vision Trade-offs (Arduino Nicla Vision). *Hardware-in-the-loop benchmark suite exposing deployment trade-offs beyond validation accuracy; protocol-driven evaluation and reproducible runs.* **2026**

MuseINO (TinyHack Torino, Italian Tech Week 2025). *Edge “Instagram for museums” prototype using Arduino Nicla Vision to measure visitor attention privately, functional MVP built in ~24h.* **2025**

Swiss AI Weeks (ETH AI Center 2025). *Multi-agent dialog-to-action system with disagreement arbitration and safe human handoff for financial advisory tasks.* **2025**

OnlyFly (HackUPC 2025, 4th/150+). *AI home-exchange MVP integrating preference matching, flight search (Skyscanner), and payments (Revolout).* **2025**

PostGenius (GenAI.Works 2024, 7th/4,500). *RAG-driven multimedia generator (text, image, video) built with OpenAI, Vectara, and Runway APIs.* **2024**

EDUCATION

MEng in Artificial Intelligence and Data Analytics, Politecnico di Torino, Italy

Apr 2024 – Dec 2026

BSc in Computer Engineering, Politecnico di Torino, Italy

Oct 2020 – Apr 2024

SKILLS & INTERESTS

Core:	LLM systems (fine-tuning, evaluation, RAG, tool-calling agents), ML systems engineering, AI agents, Transformer Models
Programming:	Python, C/C++, Rust, Bash
ML Stack:	PyTorch, Hugging Face, TensorFlow; experiment tracking & evaluation
Robotics & Simulation:	ROS2, Gazebo, Gymnasium, MuJoCo
MLOps / Deployment:	Docker, Kubernetes, FastAPI; monitoring/tracing for production reliability
Languages:	Italian (native), English (fluent), German (basic), Spanish (basic)
Interests:	Entrepreneurship, Politics, History, Neuroscience, Robotics, Surfing, Freestyle Skiing
